## **Computer User Questionnaire**

Many people experience a variety of symptoms after working at their computer for some period of time. Surprisingly, many don't relate those symptoms directly to looking at the screen. Instead, they may feel the headaches and tired eyes result from stress, or that a person is supposed to feel exhausted after a day at work.

Do you notice any of these visual problems? Please rate the following symptoms:

Symptom	Mild	Moderate	Severe
Headaches during or after working at the computer		<del></del>	
Overall bodily fatigue or tiredness			
Burning eyes			
Distance vision is blurry when looking up from the computer			
Dry, tired or sore eyes			
Squinting helps when looking at the computer			
Neck, shoulders, or back pain			
Double vision			
Letters on the screen run together			
Driving/night vision is worse after computer use			
"Halos" appear around objects on the screen			
Need to interrupt work frequently to rest eyes			

By letting the doctor know what symptoms you are experiencing, he or she will know what tests to perform to give you a "tailored" eye examination. We may also tell you about a type of eyewear lens that can eliminate the symptoms and dramatically improve your comfort level when working on a computer.
